Data Base (MySQL)

- user: save the database of user information
- Movie: save the database of the movie recommendation

***make sure your database information is corrected

Function and how to use:

1. Open register.php file to sign up
2. Automatically lead to login page so login with the information you use to sign up
3. Automatically lead to index.php which is the page for adding recommendation
4. 3 menu taps on the the top of the screen
 - a. First one is the leading to index.php
 - b. Movie list is an table displaying database with 2 function included delete and update (lead to update information page)
 - i. For the update you automatically return to movie list pass after press submit the update form
 - c. Last one is my favorite and personal recommended crime movies, displaying poster with css reactive
